1.0 What is SpringerLink?

SpringerLink is a powerful central access point for researchers in Science, Technology and Medicine, containing high-quality:

- Online Journals

- eBooks Series

- eBooks

- eReference Works

→ **Springer eBook Collection**

1.0 What is SpringerLink?

SpringerLink

accelerating the world of research

SpringerLink is organized in 12 Subject Collections:

1. Architecture, Design & Arts
2. Behavioral Science
3. Biomedical & Life Sciences
4. Business & Economics
5. Chemistry & Materials Science
6. Computer Science
7. Earth & Environmental Science
8. Engineering
9. Humanities, Social Sciences & Law
10. Mathematics & Statistics
11. Medicine
12. Physics & Astronomy

And 2 International Collections (journals only):

1. Chinese Library of Science
2. Russian Library of Science

2.1 Registration - Institutional

SpringerLink

accelerating the world of research

Why would your institution need to be registered?

- Register your institution's IPs with SpringerLink system
- Entitle to apply for remote username / password

which allow you to view full text

SpringerLink Administrator can contact us for the registration or changes.

Please see [Support on P.53](#) for our contact detail.

[Go to TOC](#)

2.1 Registration - Personal

Why would you, as a user, need to register?

- Set up favorites
- Create or receive new TOC Alerts and Keyword Alerts
- Save or mark your search results for future reference
- Go back to your search history
- Better organize the data, especially as you make return visits to the site

The screenshot shows the SpringerLink homepage. On the left, there is a sidebar with navigation links: 'Athens Authentication Point', 'Welcome!', 'To use the personalized features of this site, please log in or register.', 'If you have forgotten your username or password, we can help.', 'My SpringerLink', 'Marked Items', 'Alerts', 'Order History', 'Saved Items', 'All', and 'Favorites'. The main content area has a 'Welcome to SpringerLink!' message, a brief description of the service, a 'Find content by keyword' search bar, and a 'Content type' list with counts: All (3,025,950), Publications (14,493), Journals (1,556), Book Series (699), Books (12,238), and Reference Works (54). There is also a 'Featured library' section listing the Chinese Library of Science (9) and the Russian Library of Science (4).

The screenshot shows the SpringerLink 'Register' page. It has a blue header with 'Content Types' and 'Subjects' tabs. The main heading is 'Register'. Below it, there is an information icon and the text: 'Please determine the appropriate registration option. Registration is intended only for individuals to enable use of the personalization and management features on SpringerLink.' There is also an 'Individuals' section with the text: 'If you subscribe to a Springer online publication and do not have access, please:'. Two numbered steps are listed: 1) 'Register as an individual if you are not already.' and 2) 'Send an email with your MetaPress ID, the name on the subscription, and order details to the SpringerLink helpdesk.' A 'Register Individual' button is visible. At the bottom, there are email addresses for 'In the Americas' (springerlink-ny@springer.com) and 'Outside the Americas' (springerlink@springer.com).

 ¹ Click on Register to go to the registration page.

.....

 ² Click on Register Individual.

Content Types Subjects

Register

Your registration has completed successfully!

Your individual registration is complete and the information below has been e-mailed to you.

You've been logged in as **master_springer**

Your MetaPress ID is **699-15-968**

By registering with SpringerLink you are subject to the Springer-Verlag terms and conditions for electronic journals and books.

By clicking Continue, you agree to adhere to the Springer-Verlag Terms and Conditions for electronic journals and books.

You are now a registered user of SpringerLink, and you need not register again. If you need electronic access to subscribed journals or bookseries, please contact the SpringerLink helpdesk:

In the Americas: **springerlink-ny@springer.com**

Outside the Americas: **springerlink@springer.com**

 ¹ Complete the registration form and design your personal username and password. Then push Register.

.....

 ² You will then see the registration completion page with your MetaPress ID number. You will also receive a separate email confirmation from MetaPress.

.....

2.2 Login - Individual Home

After login, an Individual Home page shows.
You can view or edit your detail or start exploring.

The screenshot shows the SpringerLink Individual Home page. The page is divided into several sections. On the left, there is a sidebar with a 'My SpringerLink' section containing links to Marked Items, Alerts (5), Order History (12), Saved Items, and a list of saved items including All (24), Favorites (1), Keyword Alerts (4), Mechanics, ref to friend (1), Revistas (1), Texto, and viruses (2). The main content area is titled 'Individual Home' and features a 'Welcome to your personal homepage!' message. It includes sections for 'Edit Details' (with a 'NO IMAGE AVAILABLE' placeholder), 'Manage Memberships', 'View Contracts', 'View Subscriptions', 'View Trials', 'View Marked Items', 'Manage Alerts', 'View History', 'View Saved Items', and 'Manage Labels'. A search bar is located on the right side of the page. Four numbered callouts are present: 1 points to the 'Athens Authentication Point' and 'Recognized as:' information; 2 points to the 'Logged in as:' information; 3 points to the 'My SpringerLink' sidebar; and 4 points to the 'Individual Home' section on the right.

Trials

1 Welcome to your personal homepage!

Edit Details
This section allows you to edit the details of your individual account.

Manage Memberships
This section allows you to manage your associations with institutions, societies, or editorial boards. Please note that your subscriptions (below) do not include access granted by your associations. You should view associative access in this section.

View Contracts
A contract defines the terms and conditions for access. Contracts are evaluated in real-time by our rights management system. Subscriptions and trials (below) may change as the current state of a supporting contract changes.

View Subscriptions
Any titles which are on subscription to you will be listed here. Please note that your subscriptions do not include those of your institution. For details about your institution select it from the recognitions list in the upper-left.

View Trials
Any titles which are on trial to you will be listed here. Please note that your trials do not include those of your institution. For details about your institution select it from the recognitions list in the upper-left.

View Marked Items
The marked items list allows you to indicate items of interest discovered during your session. You can mark an item by clicking the *Add to marked items* link from anywhere on the site.

Manage Alerts
Alerts are sent to you via e-mail whenever a saved list changes. For example, if you saved a search results list today as an alert, you would receive an email containing any new items that satisfy the criteria of your search in the future.

View History
The history section will allow you to browse the events that are logged as you use the system. Page views, full text views, purchases and other actions are saved to your history.

View Saved Items
Saved items consist of both individual items and lists of items. Individual items are fixed entities like journals, journal articles or books. Lists of items are dynamic entities like search results.

Manage Labels
Labels allow you to organize your saved items. Any saved item can have as many labels applied to it as you wish. You can then view your saved items by label.

Published online: 28 November 2005

Abstract With the development of multidetector computed tomography and the improvement in the capabilities of workstations, the use of high-quality three-dimensional reconstructions and virtual images can be applied to organs other than the colon such as the stomach. As a noninvasive technique, virtual gastroscopy represents an alternative to conventional endoscopy for the detection of elevated lesions. Findings of this technique are illustrated.

Keywords Multidetector computed tomography - Virtual endoscopy - Three-dimensional computed tomography - Computer-assisted diagnosis - Stomach

Abstract With the development of multidetector computed tomography and the improvement in the capabilities of workstations, the use of high-quality three-dimensional reconstructions and virtual images can be applied to organs other than the colon such as the stomach. As a noninvasive technique, virtual gastroscopy represents an alternative to conventional endoscopy for the detection of elevated lesions. Findings of this technique are illustrated.
Keywords Multidetector computed tomography - Virtual endoscopy - Three-dimensional computed tomography - Computer-assisted diagnosis - Stomach

Virtual computed tomographic (CT) endoscopy is a new method of imaging the gastrointestinal (GI) tract in which thin-section, helical CT is used to generate high-resolution, two-dimensional axial images. Three-dimensional images simulating those obtained with conventional endoscopy are then reconstructed off-line [1]. CT endoscopy began to be developed ten years ago for evaluation of the colon. CT colonography is a safe noninvasive method to evaluate the entire colonic surface and for the detection of polyps and/or cancers. Reported sensitivities of CT colonography for the detection of polyps larger than 10 mm in diameter range from 70% to 100% [2, 3]. The development of multidetector row CT (MDCT) enables near isotropic z-axis spatial resolution that allows data acquisition with much thinner collimation. Better voxel profiles are ideal for CT virtual endoscopy because of the potential to improve polyp detection and the possibility to evaluate other GI organs such as the stomach.

Abstract
In this paper a method for detection of microcalcifications (MCCs), which appear at the beginning stages of breast cancer, is presented by using mathematical morphology. This method consists of four steps. At the first step the contrast of suspicious regions on the image is enhanced by contrast stretching. In the next step a morphological filtering process is applied by using six different structured elements (SEs). At the same step subtraction image is obtained by subtracting the filtered image from the original image. In the next step a black and white image is generated from this subtraction image by applying a threshold, which is calculated by using histogram. Finally, healthy regions are classified by refiltering black and white image using morphological opening. The proposed method tested on 17 mammograms and 82.2% success rate was observed.

Received: 9 September 2005 **Revised:** 13 December 2005 **Accepted:** 11 January 2006 **Published online:** 28 March 2006

Abstract Carbon nanotubes (CNTs) exhibit a unique combination of excellent mechanical, electrical and electrochemical properties, which has stimulated increasing interest in the application of CNTs as components in (bio)sensors. This review highlights various design methodologies for CNT-based biosensors and their employment for the detection of a number of biomolecules. In addition, recent developments in the fields of CNT-based chemiresistors and chemically sensitive field-effect transistors are presented. After a critical discussion of the factors that currently limit the practical use of CNT-based biosensors, the review concludes with an outline of potential future applications for CNTs in biology and medicine.

5.0 Searching

Start searching right on the SpringerLink Home Page.

The screenshot shows the SpringerLink Home Page. On the left is a sidebar with navigation links: 'My SpringerLink' (containing 'Marked Items', 'Alerts', 'Order History') and 'Saved Items' (containing 'All', 'Favorites'). The main content area has a 'Welcome to SpringerLink!' message, followed by a description of the service. Below this is a search section titled 'Find content by keyword' with a text input field, a 'more options' link, and a 'Go' button. To the right of the search field is a magnifying glass icon labeled '1'. Below the search field are two columns of links: 'Content type' (All, Publications, Journals, Book Series, Books, Reference Works) and 'Subject' (Architecture, Behavioral Science, Biomedical and Life Sciences, Business and Economics, Chemistry and Materials Science, Computer Science, Earth and Environmental Science, Engineering, Humanities, Social Sciences and Law, Mathematics and Statistics, Medicine, Physics and Astronomy).

 ¹ Enter the keyword to start searching.

 ² Or enter the keyword in the Find Box on every page to start searching.

The screenshot shows the SpringerLink search results page. At the top, there are tabs for 'Content Types' and 'Subjects', and a language dropdown set to 'English'. Below this is the 'All Search Results' section. It shows a search for 'abdominal' with 14,244 results. There are links for 'Expanded View' and 'Condensed View'. Below the view links are checkboxes for 'Access to all content', 'Access to some content', and 'Access to no content'. The first result is a 'Book Chapter' titled 'Abdominal Pain'. On the right side of the results, there is a search box labeled 'Find' with the word 'abdominal' entered, a 'more options' link, and a 'Go' button. Below this is a 'Starts With' section with an alphabetical index (a-z) and a 'Go' button. A magnifying glass icon labeled '2' points to the 'Find' search box.

Pair creation rate for $U(1)^2$ black holes

Simon F. Ross
Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, United Kingdom

Received 8 September 1995

I consider a truncation of low-energy string theory which contains two $U(1)$ gauge fields. After making some general comments on the theory, I describe a previously obtained instanton for the pair creation of black holes when both gauge fields are nonzero, and obtain the pair creation rate by calculating its action. This calculation agrees qualitatively with the earlier calculation of the pair creation rate for black holes in Einstein-Maxwell theory. That is, the pair creation is strongly suppressed in realizable circumstances, and it reduces to the Schwinger result in the point-particle limit. The pair creation of nonextreme black holes is enhanced over that of extreme black holes by $e^{1/4}$.

Description

Abdominal Imaging is designed for prompt publication of original articles dealing with clinical radiology of abdominal disorders, including the alimentary tract and the genitourinary system. The journal's intent is to provide an international and unique source of information to physicians interested in these fields. Diagnostic radiology, including conventional techniques, ultrasound, computed tomography, MR imaging, nuclear medicine, and interventional procedures is emphasized; submission of related pathologic, surgical and clinical material is encouraged. Emphasis and preference are given to material which can be applied directly to the diagnosis and management of patients.

To better fulfill the journal's aims and to contribute to further development of the specialty, the Journal has been organized in collaboration with a group of eminent and experienced radiologists, pathologists, and surgeons from all over the world. The Journal publishes original papers, case reports, technical and instrumental notes, and invited review articles. A separate section contains abstracts of selected papers from the current literature. Reviews of books or monographs and announcements about national or international associations and conferences related to abdominal radiology are published.

The journal assures expeditious review of submitted manuscripts and prompt notification of the authors.

Abdominal Imaging is covered and abstracted in Index Medicus-MEDLINE, Current Contents/Clinical Medicine, Excerpta Medica/EMBASE, SCI, ScSearch, and ISI/BIOMED.

Impact factor: 1.034 (2005)

7.1.4 Saved Items

You can further manage your saved items.

The screenshot shows the SpringerLink 'Saved Items' interface. On the left, a sidebar contains a 'Saved Items' section with a folder icon (1) and a list of folders: All (25), Favorites (1), Asia, Johnson (1), Mechanics, refer to friend, and viruses (2). The main area displays a list of 25 saved items, each with a row of icons (RSS, email, edit, remove) (2). A 'Create Label' dialog box is open, showing a text input field and a 'Create' button (3). Below the dialog, a 'Label Management' section (4) includes a 'Manage Labels' link. The bottom of the page contains footer information including 'Frequently asked questions', 'General information on journals and books', and 'Send us your feedback'.

 ¹ All saved items are recorded in your Saved Items folder. Click to view items kept.

 ² Click on icons to enable you doing:

 RSS

 Email this item

 Edit this item

 Remove this item from your folder

 ³ Enter a new label name, then a new folder (e.g. Favorites, Asia) will be created & displayed under My SpringerLink / Saved Items.

 ⁴ Click and go to Label Management page.

8.0 Glossary

Access Icons:	An indicator that shows users the access rights per publication.
Adobe Reader:	Full text articles on SpringerLink are published in Adobe PDF format, the most popular, most accessible cross-platform reader available.
Athens Authentication:	The Athens Authentication Service provides individual access to many online databases by using one username and password.
Browsing:	With full thesaurus support.
Electronic Supplementary Materials:	Many articles contain links to supplementary materials such as video, image and audio files that help illustrate and illuminate the article.
Exportable Results:	Search results can be exported as RIS or txt, which you can add to your citation manager. Choose the most convenient format, and export results directly to all popular citation programs: Endnote, ProCite, BibTeX and more.
Guided Navigation:	Places search results into context to show all the valid ways to refine and explore results. Guided Navigation exposes an array of related terms, headings, formats, and other dimensions that equip users to find what they are looking for. Guided Navigation builds context around each search, so users are constantly prompted with useful next steps. The navigation prioritizes and organizes relevant information, while removing non-relevant results.
Highlighted Terms:	Optional highlighted search terms in results provide a quick overview. Search terms are highlighted in the text, and the search window includes a hyperlinked list of matches. This affords researchers both greater speed and increased precision.
IP Authentication:	Process of validating a user by IP range. When a request is received by a SpringerLink web server, the IP address of the requesting computer is verified. If it is within the allowed range of addresses, this computer is allowed to access applicable content in SpringerLink. IP authentication is efficient and makes sense when users are connecting from a central location, such as a university campus. However, IP authentication alone does not work when users are attempting to access these resources from off-site locations without going through the institution's Intranet or VPN. In these situations, a user can access through remote username and password.

8.0 Glossary

SpringerLink

accelerating the world of research

Linguistic Stemming:	Search recognizes English and German roots, e.g. Haus, Häus.
MetaPress ID:	An account number assigned by the SpringerLink / MetaPress system.
My SpringerLink:	A personal user profile where patrons can set bookmarks, or recent searches, TOC, keyword alerts and subject alerts for new content.
Online First™:	Springer's exclusive online advance program permits early access to books and journal articles before print publication.
Open Choice:	Allows authors to choose their method of publication through an open access option and have their articles made available free to anyone, anywhere in the world.
Proximity Search:	Search for term within x words of another term, as well as Near, Followed By, Not Near, and Not Followed By.
RSS Feeds:	Really Simple Syndication. RSS feeds are available in different capacities to allow users to refine data as they choose.
SpringerLink Administrator:	The administrator of your institution, who manages SpringerLink technical matters.
Username / Password:	<ol style="list-style-type: none">1) Remote username/password allows users to view full text.2) Personal username/password allows users to enjoy the personalized services, but not to view full text.
Wildcards and Special Characters:	Searches can include wildcards as well as special characters, such as German Umlaute and Greek symbols.

Help
Access and Registration
How do I get access to full-text articles on SpringerLink? [Top](#)
For online access to full-text articles in a journal on SpringerLink, you or your institution should be a registered subscriber to that journal. For online access to full-text articles in a book series on SpringerLink, you or your institution should have a standing order to the series or an electronic-only subscription to the series. For detailed product and licensing information please go to springeronline.com/librarian.
Why should I register with SpringerLink? [Top](#)
Registration allows you to benefit as an individual user who is able to use our special personalization features such as new issue and keyword alerting, Favorites linking, and free samples. Additionally, an individual registration allows you to purchase articles on SpringerLink, which will always be available in your account "Order History."
How do I register with SpringerLink as a new customer? [Top](#)
Registration is free and simple. Once you access the SpringerLink homepage, please click on the "Register" button located on the bottom-right of the homepage beneath the "Login" box. This will display a page with the option to register as either an "Individual" or an "Institution"-please click on the "Individual" button. On the next page, you will be able to fill in simple contact information and create a username and password that you will use to access the site in the future. After the creation of your login for SpringerLink, you will be asked to accept the terms and conditions for using electronic content offered by Springer.
Once you have filled out all necessary fields and registration is complete, an e-mail notification with your login credentials will be automatically sent to your email address. The "Registration Complete" page reminds you of your username and provides you with an eight-digit identification number (Metapress ID) that will be handy if you ever need to contact the SpringerLink helpdesk. Clicking on the "Continue" button will take you back to the SpringerLink homepage where you will be automatically recognized. You will now be able to take advantage of the special features offered by SpringerLink as a registered user.
